

Heat Protection Information

Some vehicles may exhibit higher engine compartment and exhaust system temperatures in some operating modes than in previous model years. Components, including exhaust heat shielding systems, have been installed on some vehicles in our assembly plants in an effort to provide greater protection against such temperatures. Subsequent manufacturers are responsible for providing thermal protection (e.g., underbody heat shields) for any structure and/or equipment added to the vehicle and should not remove any components and/or exhaust heat shielding installed on the vehicles by Dodge.
